The following instructions are tested for Apple iPad with iOS 7.1.2 interface. Setup for other versions of iPad, iOS, or iPhone will be similar but may vary. This guide assumes your iPad has been setup and is ready to use. You must also be on campus to perform the configuration.

**Step 1 : Choose the Network**
- Tap “Settings” icon from your home screen.
- Tap “Wi-Fi” in the left column.
- Make sure “Wi-Fi” is turned on on the right side. The device will start to search for wireless networks.
- Once a network named “4csuuseonly” is listed in the “Choose a Network” section, tap it to select this network.

**Step 2 : Enter Username/Password**
- Use your 7-digit CSU ID number for the username. The number can be found on your CSU ID card.
- Use your CampusNet password for the password. It’s the same password you use to access the CampusNet website.
- Tap “Join” when done.

**Step 3 : Accept Certificate**
- You will be prompted to accept a server certificate. Verify that it’s a “GlobalSign Root CA” from “acs-wow.csuohio.edu”
- Tap “Accept” to accept the certificate.
Step 4 : Verify

- You will be back on the “Settings” screen, and if everything is configured correctly, you should have “4csuuseonly” next to the Wi-Fi menu item, and it should also be checked in the “Choose a Network” list.
- You now have Wi-Fi access to CSU’s secure Wi-Fi network. A Wi-Fi signal icon should appear on the top-left corner of the screen.
- Finally, verify your access by browsing the Internet.
