FRAMING CHANGE: CAUSE LAWYERING, CONSTITUTIONAL DECISIONS, AND SOCIAL CHANGE

Mary Ziegler*

BIO: * Mary Ziegler is an Assistant Professor of Law at St. Louis University, and would like to give special thanks to Reva Siegel, Robert Post, Michael Klarman, William Eskridge, Bob Gordon, and Kenneth Mack for their insightful comments on earlier drafts.

[*264] I. Introduction

The struggle for same-sex marriage has provoked the most recent crisis of confidence in constitutional litigation as a tool for social change. In the wake of California's passage of Proposition Eight, a referendum overruling a state decision striking down bans on same-sex marriage, a familiar set of concerns and complaints has resurfaced. n1 Some have [*265] questioned the courts' institutional capacity to generate change, either because they cannot ensure that their rulings will be enforced n2 or because they cannot change the beliefs of those whose views determine the course of policy. n3 Others emphasize the ways in which litigation has [*266] de-radicalized social movements, since courts favor moderate, legally grounded arguments that may enforce the social status quo. n4 Although they focus on the value of litigation as a tool for change, critics of change-oriented litigation also offer a powerful account of the relationship between social change and judicial decision-making. In this account, as we will see, law is argued to affect neither the concrete enforcement of rights nor popular opinion about the justice of a movement's arguments.

In this Article, I challenge this view of the relationship between law and social change, and I reexamine arguments on the shortcomings of litigation. By critically evaluating these arguments, we can derive the basic premises of a model shared by litigation's critics of how social change occurs. The first premise of this model addresses the relationship between law and social change. Litigation's critics reason that legal reforms almost inevitably mirror shifts in social mores and popular opinion. This is the reflectionist hypothesis: law reflects but does not reshape public attitudes and views. The second premise addresses how social change happens. This is the cause-acceptance hypothesis: social change occurs when a majority of the public accepts the legitimacy of the movement's complaint. A final premise concerns law's relevance to social movement campaigns. This is
the clean-up hypothesis: court decisions matter only when they strike down already unusual and unpopular laws or implement remedial measures the public already supports.

By offering an alternative account of the relationship between legal and social change, this Article complicates current accounts of how legal and social change relate to one another. Contrary to what is suggested [*267] by the reflectionist hypothesis, decisions and change-oriented litigation may sometimes produce social change indirectly, by redefining a social practice like same-sex marriage and thereby influencing citizens' attitudes. This model is one of "constitutional framing," whereby movements, countermovements, and officials in constitutional debates compete and collaborate in changing or reinforcing the meaning of social practices.

The changing definition of a movement's cause may have effects more complex than the outcomes and shifts in public attitudes on which litigation's critics focus. When the prevailing meaning of a practice changes, a decision can alter the argumentative strategies adopted by opposing movements, the alliances each side can pursue, the policy opportunities available to competing groups, and the ways in which a movement can influence popular opinion. The framing effects of a decision may favor progressive social movements or conservative countermovements. In either case, constitutional framing demonstrates that social change occurs not only when members of the public accept the justness of a progressive or conservative movement's cause, but also when the public redefines that cause in a way that favors change.

Finally, contrary to what is suggested by the clean-up hypothesis, I contend that movements may sometimes benefit from using litigation rather than ordinary protest tactics to advance a particular frame. Because litigation can foster the expression of alternative arguments, the courts offer movements an opportunity to present a variety of possibly effective frames. When it does not yet have political influence, a movement may often have to rely on the media to publicize a frame. In such a case, movements have reason to silence dissent, for the media are likely to focus on internal divisions once they are discovered rather than on the movement's message. Consequently, social movement organizations may press members to speak with a single voice and to suppress alternative frames. By contrast, in applying rules governing pleading and the submission of amicus briefs, the courts may foster forms of dissent that would prove too costly for movements in the political arena.

Because high-salience, controversial decisions attract media coverage, litigation may offer a strategically low-cost way for movements to publicize a new frame. As we will see, movements that have not yet attracted the support of legislators often turn to the media to publicize a frame of a group's cause. However, social movement scholarship suggests that direct media coverage of movement protests may be strategically risky. If the movement appoints a spokeswoman, [*268] the appointed leader may gradually become unaccountable to the group she represents. A similar risk is involved if a movement chooses no leader to spread its message and hopes simply to promote a frame through public protest. In such cases, the media may themselves choose a leader or interpret a frame in a way contrary to a movement's interests. If litigation generates a high-salience judicial decision, that decision may offer a less strategically risky way for a movement to publicize a frame. Media coverage of high-salience decisions encourages the public to debate the merits of a decision's reasoning and result. When discussion focuses on a different set of questions, the prevailing meaning of a movement's cause may change as well.

Part I sets the stage for a reconsideration of the relationship between legal and social change. Because skepticism of litigation as a means of social change has become an important theme in con-
temporary constitutional scholarship, Part IA begins by focusing on several leading critics of change-oriented litigation: Michael Klarman, Gerald Rosenberg, Tomiko Brown-Nagin, and William Eskridge. Part IB sketches a model of the relationship between legal and social change set forth in the otherwise different work of these theorists.

The remainder of the Article develops a complementary model. Part II briefly sketches an alternative understanding of the relationship between legal and social change. By focusing primarily on the courts’ ability to enforce constitutional rights or increase popular approval of a movement’s cause, this Part argues that litigation’s critics fail to capture important effects of judicial decisions on political debates.

Part III elaborates on the model described in Part II by studying the history of two major battles in contemporary culture wars: abortion and same-sex marriage. I focus on these case studies not because framing effects always advance progressive causes; there is reason to believe that judicial decisions have often reframed important debates in a way that advances conservative countermovement causes. Instead, I examine these examples because they often are cited as evidence of the shortcomings of change-oriented litigation.

Currently, we often take for granted that these debates address whether abortion involves a woman’s right to choose or whether same-sex marriage involves the gay citizens’ right to equal treatment. However, the history studied in Part III shows that these frames were not always in place. In a series of litigation battles before and after Roe, movement dialogue downplayed population-control frames and forged a woman’s-rights frame similar to the one familiar to us today. In creating an equality-based frame, state judicial decisions on same-sex marriage helped to deemphasize frames stressing the legitimacy of homosexuality as a lifestyle or emphasizing the unique social value of marriage.

Drawing on this history, Part IV shows that change-oriented litigation may serve not only to produce victory for individual clients or to generate precedent favorable to a movement’s reform agenda. Litigation may also change what a movement’s cause is understood to be. By using the historical narrative offered in Part III, I show that litigation’s critics have missed important avenues of change sometimes available through litigation. Judicial decisions may alter how movement grievances are labeled, defined, and debated. Of course, the receptivity of a court to a particular frame will vary depending on, among other things, the configuration of the court and the political climate in which a case is decided. But when a judicial decision helps to redefine a cause, the political environment may ultimately become more favorable to change. Framing teaches that we should be careful not to underestimate the benefits of litigation. While it may not convince anyone of the rightness of a movement’s complaint, litigation may reshape the political climate in a way that makes change more possible.

II. Litigation and Its Critics

In recent years, criticisms of change-oriented litigation have been varied and profound. In this Part, I study several of litigation’s major critics, drawing out a model of social change from which they build different arguments. Scholars of legal anthropology have openly debated the nature of the relationship between legal and social change. By contrast, litigation’s critics work from an unstated and assumed account of this relationship. Part IA opens with an examination of leading criticisms of change-oriented litigation. While offering significantly different proposals, I argue that these scholars work from a shared model of the relationship between legal and social change. Part
IB sketches this model and explores its major premises. If we examine and challenge the premises on which this model is built, we will be better able to understand alternative, indirect routes to social change.

A. The Problems With Litigation

Gerald Rosenberg's landmark studies were among the first to propose that "court decisions are neither necessary nor sufficient for producing significant social reform." n8 Rosenberg's main contribution has been to cast doubt not only on the courts' willingness to create social change but also on their ability to implement their decisions. n9 Because they possess few tools to ensure compliance with their decisions, it is argued that courts are not able to create social change unless "their decisions are supported by elected and administrative officials." n10 Rosenberg further argues that support from the public or political elites is necessary to gain sufficient popular support to implement broad social change. n11

Rosenberg also examines an alternative, "extrajudicial" path of influence, by which court decisions "inspire individuals to act or persuade them to examine and change their opinions." n12 In his analysis [*271] of Roe, for example, Rosenberg states a number of claims that could be made in favor of extrajudicial influence: an argument that the Roe Court "greatly influenced popular opinion in favor of abortion" or a claim that the courts "spurred women to form and join women's rights organizations and to raise large sums of money." n13 Based on his analysis, Rosenberg finds no evidence in support of these claims. n14

Like Rosenberg, Michael Klarman challenges the courts' institutional capacity to generate social change. Klarman highlights the backlash the courts may produce in the rare instances in which their opinions do not track popular opinion. He explains that, "by outpacing public opinion on issues of social reform, such rulings mobilize opponents, undercut moderates, and retard the cause they purport to advance." n15

Moreover, Klarman reasons, there are few positive indirect effects of change-oriented litigation to offset costly backlashes. He acknowledges that judicial victories can have important symbolic value to a movement but questions whether decisions have any broader social impact. n16 By raising the salience of an issue, the courts are argued to be able to "force many people to take a position [for the first time]." n17 However, he contends, salience-raising fuels backlash and may thus harm rather than help the cause the courts endorsed. n18 Moreover, he offers evidence that judicial decisions do not "influence the position" people take nor make them more "strongly committed to implementing the ruling." n19

[*272] Unlike Klarman, Tomiko Brown-Nagin focuses not on the courts' institutional incapacity, but instead on the adverse effects of change-oriented litigation on social movement efficacy and strategy. n20 Brown-Nagin claims that social movements risk much by using constitutional law to define their campaigns. n21 The courts will fail to deliver the change a movement demands because their decisions are often "moderate, elitist, and utilitarian," the product of negotiations among members of the elite and their effort "to find consensus amidst cultural conflict." n22

In her view, these outcomes illustrate how social movements are fundamentally in tension with constitutional law and litigation. n23 Law demands that movements de-radicalize, play by institutional rules, and make only those demands that law would recognize. n24 If movements define themselves by litigation, she argues, they lose their ability to challenge existing policy compromises
Only when public attitudes change noticeably can movements effectively pressure the government to recognize the legitimacy of their claims. By comparison to Brown-Nagin, William Eskridge suggests that even definitional litigation campaigns can have both benefits and costs to social movements. He shows that movements and law have a dialectical relationship: movements propose doctrines and constitutional revolutions that the courts adopt, albeit often in modified form. In turn, constitutional law "influences the rhetoric, strategies and norms of social movements." In Eskridge's view, law helps to define and even create identity-based social movements, first by enforcing discrimination against them and then by giving "concrete meaning to the "minority group' itself." Later, law gives identity-based social movements a chance to demand social change and permits them to reemerge as mass political mobilizations.

In Eskridge's account, however, some litigation campaigns and judicial decisions have a negative impact both on social movements and on the larger society. As one key example of such a campaign, Eskridge points to Roe v. Wade. Eskridge asserts that Roe announced abortion rights in a "politically insensitive way" by acting before political consensus about abortion rights had been reached. For this reason, Roe "undermined" abortion rights "by stimulating extra opposition to" them.

While often carefully exploring the benefits of some change-oriented campaigns, Eskridge's work suggests that those campaigns should be limited. He implies that "constitutional law can change if a longstanding political equilibrium is destabilized, and it must change if the public culture settles into a new political equilibrium." If these conditions are not in place, a favorable judicial decision may damage the movement whose cause has been embraced and generate "immediate and longstanding political turmoil." In different ways, and for different reasons, litigation's critics argue that social movements should not invest limited resources in change-oriented litigation. For example, Rosenberg argues that change-oriented litigation "may not be the best use of scarce resources in important battles for significant social reform." If the courts follow popular opinion and are institutionally incapable of changing it, as Klarman's account suggests, social movements should focus on changing popular opinion by direct-action protest. He speaks for others in stating that litigation alone "cannot fundamentally transform a nation."

Critics of litigation offer deeply different arguments about the effects of constitutional litigation on movement strategy and the shortcomings of litigation as a tool for change. However, Their arguments proceed from a shared account of the relationship between legal and social change. This model of change rests on a set of hypotheses about how law relates to social change, how social change occurs, and how law can serve change campaigns. If we understand these hypotheses, we can begin to develop an alternative model of social change.

As we have seen, litigation's critics question whether constitutional decisions can deliver the social changes a movement seeks. These claims all follow in part from the hypothesis that law reflects
public mores, attitudes, and values. For example, Brown-Nagin writes: "It is only after such [public] attitudinal changes occur or are under way that lawyers might successfully seek changes in law." n39 Eskridge also reasons "constitutional law can change [only] if a longstanding political equilibrium is destabilized." n40 This is the reflectionist hypothesis: a claim that law reflects popular values, opinions, and mores.

Constitutional framing challenges the hypothesis that law only reflects popular mores and opinions about a movement's cause. It proposes that, under some circumstances, constitutional decisions and litigation can also redefine a movement's cause and reshape debate about it. Much will depend, for example, on whether the public views abortion as an issue of women's rights or as a gender-neutral public health crisis. When a decision helps focus debate on a different set of policy questions in this way, it may change which questions are discussed, alter which arguments are used, reshape the coalitions addressing a movement's grievance, and determine which goals these coalitions are likely to achieve. In this way, constitutional framing can make change more possible.

[*275]

2. The Cause-Acceptance Hypothesis

If law cannot create social change, how do litigation's critics believe social change occurs? The model underlying otherwise different criticisms of litigation suggests an answer. First, a group of people must recognize and articulate a shared grievance. n41 That movement then develops a repertoire of effective protest tactics, such as marches, media events, advertisements, lobbying, or sit-ins. n42 This effort is a political one that unfolds outside of court. n43

Social change ultimately happens when popular opinion recognizes the legitimacy of a movement's complaint. For example, Brown-Nagin explains that social change is possible only when "public attitudes ... changed substantially and noticeably, so much so that the media recognize and confirm the shift in opinion" and public officials are pressured to act. n44 Rosenberg suggests that legislative and judicial action on abortion became possible when "opinions on abortion ... changed rapidly." n45 Klarman similarly measures social change in race relations by studying public opinion shaped by "deep-seated social, political, and economic forces." n46 This is the cause-acceptance hypothesis: social change occurs only when movements in the political arena convince the public that their cause is legitimate.

However, we can better understand how popular opinion changes by looking at more than mere disapproval or approval of a practice. n47 Instead, constitutional framing proposes that attitudes toward a practice [*276] will depend on which questions are central to a debate. An issue like same-sex marriage or abortion will involve several, sometimes conflicting, policy considerations. A citizen's opinion will depend in part on which of those considerations is given the most weight. After all, we would not be surprised if someone were more willing to oppose global warming when environmental damage was highlighted than she would when the cost of reducing carbon emissions was stressed. When shifting the meaning of a movement's cause and the public debate about it in this way, constitutional litigation and decisions can help to create a political environment that favors change.

3. The Clean-Up Hypothesis
The final and arguably most important question addressed by litigation's critics involves the role that litigation and law can play in creating social change. Leading criticisms suggest that while litigation alone cannot deliver the social changes movements demand, the courts can strike down outliers, and produce and elaborate on remedies already supported by popular consensus. Rosenberg acknowledges that "litigation can remove minor but lingering obstacles," and he suggests that court-delivered remedies can be part of a "mopping-up operation." n48 Eskridge also explains that, once a national consensus develops in favor of a result, "the Court will become part of the clean-up process." n49 Klarman often asserts that the Court's decisions reflect the general "propensity of constitutional law to suppress outliers," n50 and Brown-Nagin agrees that movement attorneys must "mobilize outside the law before attempting to change society through law in the courts." n51 This is the clean-up hypothesis: a proposal that the courts can do little more than strike down unpopular decisions or create enforceable rules and remedies once popular opinion has shifted in a movement's favor.

Constitutional framing demonstrates that constitutional law and litigation can sometimes play a broader and more complex role than the clean-up hypothesis suggests. Framing shows that judicial decisions not [*277] only strike down unpopular laws but also produce environments that favor political change. After a high profile decision, debate will turn in part on whether the Court reached the right conclusions on the issues it addressed. When the Court brings attention to new issues, its decision may refocus and reshape popular debate. When addressing a different question about abortion or same-sex marriage, movements and countermovements may be able to make different claims, win different kinds of members, build new alliances, and pursue different kinds of legislative reform.

Constitutional framing offers a supplemental understanding of the relationship between legal and social change. In this model, movements, countermovements, and officials engage in dialogic framing struggles, contesting and collaborating to determine which issues will be central to a case. When the courts adopt or modify one of these frames, the resulting decision may raise awareness about important constitutional issues that would not otherwise have received political consideration or attention. When debate refocuses on these different issues, the political climate for change may have shifted in a movement's favor.

Criticisms of litigation assume that law reflects social mores. What alternative does constitutional framing propose? How does this alternative model operate in practice? Part III turns to these questions.

III. A New Model of Change

In 1960, in the wake of the backlash that followed the Court's decision in Brown v. Board of Education, n52 legal scholar Charles Black, Jr. proposed that the courts influenced social change not by encouraging the public to see the flaws in laws declared to be unconstitutional but instead by legitimating laws that were upheld. n53 Black suggested that, by upholding new policies, the courts could at least reinforce legal and political change. n54 Since the time Black was writing, we have seen that a growing body of scholarship has cast doubt on the validity of even Black's modest proposal. As Keith Whittington has recently put it, "The Court appears to be more likely to reinforce existing cleavages in public opinion than to build consensus behind policies that it [*278] validates." n55
Why are litigation's critics so adamant that law only reflects popular attitudes? The answer may lie in part in how these scholars measure social change. Litigation's critics first focus on measurable shifts in popular attitudes. These measurements serve two purposes for critics of change-oriented litigation. First, critics like Rosenberg have contended that the public is unaware of controversial decisions and their content. If people do not know what the court has said, a judicial decision is unlikely to produce change. Other critics argue that, although the public is aware of controversial opinions, judicial decisions still have no effect on public attitudes. The courts are argued to be unable to convince people to accept the legitimacy of causes that the public formerly rejected. Moreover, as Brown-Nagin emphasizes, the courts are attracted to compromise and are thus unlikely even to promise the kind of change movements seek.

The second primary measurement used by litigation's critics involves the courts' ability to enforce the rights they announce. That the "courts ... have neither the purse nor the sword," as Martin Shapiro [*279] writes, is well understood. Because courts are also argued to be incapable of altering popular acceptance of a practice, judicial decisions are thought not to encourage public compliance with or official enforcement of a decision.

These measurements offer useful insight into some aspects of our legal system. Recent empirical studies have shown that judicial decisions sometimes have no measurable impact on popular opinion, as was the case when the Court struck down a flag-burning ban in Texas v. Johnson. Other studies suggest that the Court's decisions increase elite support, as was the case with the Court's death-penalty decisions in the 1970s. These examples indicate that the outcome-based measurements used by litigation's critics offer valuable information about the relationship between legal and social change. But because they focus primarily on these indications of social shifts, litigation's critics offer a fundamentally incomplete account of the relationship between law and social change.

This account is inadequate partly because it considers only whether public approval or disapproval of a cause shifts, not how or why such shifts occur. In recent years, "sociolegal" scholars have suggested one way that law influences popular attitudes: by structuring the way citizens understand the world around them. This explanation draws on cross-disciplinary work about what Erving Goffman first labeled framing: "frameworks of understanding available in our society for making sense out of events." Framing an issue is a way of defining, labeling, and understanding it.

Complex constitutional issues like the availability of legal abortion or the legalization of same-sex marriage can be defined in a number of different ways. For example, we may know that the "pro-choice" movement favors broader rather than narrower access to legalized abortion. Hypothetically, however, we could imagine a number of reasons why the movement had this goal. Some reasons may appeal to us more than others and make us more likely to tolerate or even endorse a cause.

A growing body of scholarship confirms that the framing of a group's cause is central to its ability to win recruits, to sustain protest, and to influence how other groups and bystanders view that event or cause. As social movement scholar Doug McAdam explains, "successful framing efforts are almost certain to inspire other groups to reinterpret their situation." Because so much is at stake in the framing of an issue, social movements often compete in dialogue with one another to frame an issue. These framing campaigns may play a key role in determining what kinds of social change are possible. By convincing members of the public that one's definition of a cause is the right one, movements take an important step in creating support for that cause.
In this sense, social movement scholarship reflects common lessons in legal advocacy about the central importance of effectively framing an issue or question. To frame an issue correctly, as one legal writing manual advises, is to begin persuading the judge to decide the issue in your client's favor. By publicizing a different definition of a group's cause, in turn, a judicial decision may create an environment that favors change.

Litigation's critics neglect this dimension of social change. If we follow some of litigation's critics in looking only at approval or disapproval of a practice, we will miss the beginnings of changes in public attitudes. As social movement scholar Joseph Gusfield explains, the framing of a cause can create "the recognition that some accepted pattern of social life is now in contention." Thus far, I have suggested that judicial decisions sometimes change the social meaning of movement causes. By focusing public attention on a different issue, a controversial decision can reshape the social meaning of a cause. However, there is also reason to think that, in some cases, movements will benefit from using litigation rather than ordinary protest tactics in advancing a frame.

The first and less controversial advantage of litigation involves the relative costs of dissent in court. If they lack the ability to influence a legislature, movements using direct action protest tactics to generate official support must often rely heavily on the media to publicize a frame or "mobilize popular support." As social movement scholar Doug McAdam has explained, "The simple fact is that most movements lack the conventional political resources possessed by their opponents and thus must seek to offset this power disparity by appeals to other parties. The media has come to be seen - logically, in my view - as the key vehicle for such influence attempts." A movement may try to promote a frame directly, through working to attract media coverage of a group's protest activities, or indirectly, through obtaining a high-salience judicial decision that publicizes a frame.

Social movement scholarship points to strategic risks associated with using direct media coverage. When there are intense struggles within movements regarding cause or identity, a movement may lose control of its message, as "this internal movement conflict can easily become the media's story" and focus. Social movement scholars Todd Gitlin and Patricia Bradley have shown that the media diluted the messages of the Feminist and New Left movements in this way by focusing not on the frame presented by a group but on internal divisions within it. Consequently, formally structured "social movement organizations" often suppress a rich variety of competing frames in order to present an image of unity and to exercise control over the frame that the media will cover. In mounting an effective political or media campaign, movements are pressured to speak with one voice. In the process, other important views within a movement may not be heard by the public.

By comparison, litigation may sometimes offer movements a better chance to promote diverse frames. As we have seen, an effective political or media strategy may require a movement to silence dissenting members, at least in public debate. By contrast, the Federal Rules of Civil and Appellate Procedure, like those in many states, foster a form of dissent. Like many state equivalents, Federal Rule of Civil Procedure 8(d) invites "hypothetical" and "inconsistent" claims. Amici without the resources or organization to mount a test case will still often be able to present a frame to the court.
Second, the courts may lower the costs of broadcasting a frame to the public. By attracting media attention, a controversial judicial decision can increase public awareness of that subject and encourage the public to debate the questions addressed by a court. n82 Of course, recent scholarship has questioned whether judicial decisions in fact raise the salience of particular issues. Frederick Schauer has contended that controversial opinions do little to shape the nation's political agenda or policy priorities. n83 More recently, Rosenberg has pointed to evidence that the public is not able to identify controversial decisions or describe their reasoning. n84

But even if we assume these claims to be correct, there are other ways that judicial decisions may raise awareness of an issue and offer an effective way to publicize a movement's frame. In particular, social movement scholarship has documented the importance of media coverage to the success of a movement's framing efforts. n85 As social movement scholar William Gamson explains, the media offer a valuable opportunity for "advocacy groups that are relatively poor in conventional resources and limited in access to decision-makers" to publicize a frame. n86 A movement may attempt to attract media attention for its frame in a number of ways: by winning the attention of relevant elected decision-makers, recruiting a charismatic leader, or staging a dramatic event or protest. n87

However, social movement scholarship identifies costs that accompany each of these strategies. Advocacy groups that do not have the resources or organization to lobby elected officials will have difficulty convincing public decision-makers to advance a particular frame. n88 A movement faces a different set of difficulties when speaking through a charismatic leader or using dramatic protest tactics. As Todd Gitlin has documented in his studies of the New Left, charismatic leaders capable of promoting a frame may become media celebrities who are no longer accountable to the movement. n89 Similarly, when a movement stages dramatic protests and chooses not to put forth a leader, the group may risk losing the ability to promote its own frame and may "invite the media to designate who will speak for the movement." n90

When the Supreme Court announces a controversial decision that adopts or modifies a movement's frame, that decision may lower the strategic cost of publicity for a movement. Although the Court receives substantially less coverage than do the other branches of government, the media pay significant attention to dramatic decisions on divisive issues. n91 In particular, studies of press coverage of the Supreme Court show that the media publicize judicial work product, including the frame of an issue that the Court adopts. n92

Of course, the likelihood that a court will adopt a particular frame may depend on a number of factors, including the political leanings of the judges hearing a case and the popular climate surrounding a decision. However, when a high-salience decision attracts media attention, a blockbuster decision may also encourage officials and social movement leaders to focus on the result and justification offered by the court. As different issues become the center of debate, citizens may come to define an issue differently.

When a decision helps to assign a different meaning to a movement's cause, the argumentative strategies and alliance-building opportunities available to either side may shift as well. Regents of California v. Bakke, n93 the Court's first major affirmative action decision, had such a framing effect. Before Bakke, in the mid-1970s, affirmative action was often primarily discussed in tandem with busing as a denial of free choice. n94 Opponents of both practices like New York Senator James Buckley, rising Republican Patrick Buchanan, the conservative Young Americans for Freedom, and African-American economist Thomas Sowell made similar arguments against both poli-
cies. \(\text{n95}\) Like busing, affirmative action was argued to deny black and white families "freedom of choice." \(\text{n96}\) Like busing, affirmative action was also seen to be the work of an "intrusive government" that claimed the "right and the ability to move people around like they were blocks of wood." \(\text{n97}\) In turn, proponents of affirmative action characterized both busing and \(*286\) affirmative action as tools necessary to achieve racial integration. \(\text{n98}\) As NAACP Chief Counsel Nat James explained, those opposed to busing or "special admission" affirmative action programs were thought to be focused on "complicating the process of desegregation." \(\text{n99}\)

Instead of focusing on this integration-based frame, Justice Powell's influential concurrence in Bakke distinguished impermissible "quota" programs from constitutional affirmative action programs that used race only as a "'plus' in a particular applicant's file." \(\text{n100}\) Powell's opinion suggested that it was wise to distinguish acceptable and unacceptable affirmative action. As importantly, Powell's Bakke concurrence offered a frame for affirmative action that differed significantly from earlier integration-based accounts, a frame based on the importance of individual consideration and the unique harmfulness of group classification.

In the aftermath of Bakke, discussion gradually focused not on the proper tools used to achieve integration but instead on which affirmative action programs, if any, were not "quotas." \(\text{n101}\) As Bakke shifted the terms of debate, the coalitions discussing the issue were, for a time, reshaped as well. Before Bakke, Republican leaders often denounced all affirmative action as "sex and race quotas." \(\text{n102}\) After the decision, the Reagan Administration endorsed "race neutral affirmative action," \(\text{n103}\) and leading Republicans like Orrin Hatch began distinguishing between programs mandating preferential treatment for individuals and those "anticipated to result in improved opportunities \(*287\) for deprived individuals, a disproportionate number of whom may be members of minority groups." \(\text{n104}\)

Brown similarly reshaped political debate about segregation. As Michael Klarman has documented, it was possible before Brown for racial moderates to support segregation without endorsing white supremacy. \(\text{n105}\) Politicians like Big Jim Folsom and Lyndon Johnson were able to combine race-equality rhetoric and gradual racial reform with clear support for school segregation. \(\text{n106}\) By equating support for segregation with rejection of racial equality, Brown helped to radicalize debate and to redefine segregation as a practice inextricably linked to white supremacy. \(\text{n107}\)

A quick glance at the framing effects of Bakke and Brown suggests that, by redefining a movement's grievance, a judicial decision may benefit either a progressive social movement or a conservative countermovement. Of course, in most instances, when the courts address low-salience issues, there will be no observable framing effects. \(\text{n108}\) In other cases, the reframing of an issue has both costs and benefits for those on either side of a debate. After Bakke, for instance, the realignment of coalitions made it more difficult to maintain federal legislation imposing quotas for the hiring of minority construction workers. \(\text{n109}\) At the same time, Bakke temporarily increased support for "quota alternatives," such as voluntary or incentivized efforts to recruit minority candidates. \(\text{n110}\) In other cases, as with the radicalization of Southern politics after Brown, a decision may redefine a cause in a way that works primarily in a countermovement's favor, at least in the short term.

By redefining an issue, a judicial decision may set back or advance a \(*288\) campaign for change. However, the normative point to be taken from constitutional framing is that litigation can still matter to a change campaign. In spite of the concerns raised by critics like Rosenberg and Klarman, it may still be worthwhile for movements to use their resources on litigation, even early in
a struggle. In some cases, litigation may be able to reshape the meaning of a movement's cause in a way that ordinary politics cannot.

How may judicial decisions redefine a cause in practice? Because critics of change-oriented litigation often focus on battles in the contemporary culture wars, Part IV reexamines the history of two important struggles involving abortion and same-sex marriage. If we examine how the arguments and coalitions in these debates have changed over time, we may come to a different understanding of the role of litigation as a tool for change.

IV. Redefining the Culture Wars

Critics of change-oriented litigation suggest that social movements go to court seeking to win acceptance for their cause. However, as we will see, there is more than one reason to go to court. Part A examines how the definition of the abortion-legalization cause evolved after Roe. We have come to associate pro-choice politics with debate about a woman's right to choose abortion. Before Roe, this frame was often less prominent than those involving physicians' rights and population control. Roe helped to marginalize claims about population growth, and the decision helped to focus new attention on claims about women's reproductive autonomy and equal citizenship.

Part B evaluates the history of the same-sex marriage movement and the evolving definition of its cause. In recent years, we have come to take for granted that the same-sex marriage debate turns on demands for equal treatment and civil rights. However, this frame was not always in place. In the mid-to-late 1990s, national anti-gay organizations framed the discussion as a referendum on the legitimacy of homosexuality as a lifestyle, and national gay rights groups instructed their members not to describe the issue as one of sexual-orientation discrimination. In a series of decisions, state supreme courts stressed equality-or civil-rights rhetoric when defining the same-sex marriage cause. Partly in response, we will see that gay rights organizations began emphasizing equality-based claims to a greater extent than they had before. At the same time, as the terms of the debate shifted, opponents of same-sex marriage reshaped their own arguments in response, first deemphasizing open condemnation of homosexuals and later downplaying defense-of-marriage contentions.

This history shows that judicial decisions like Roe and Goodridge v. Department of Public Health did not simply fail to educate the public or trigger backlashes. Instead, these decisions also drew public attention to a different set of questions. As public debate focused on a new subject, the meanings of each struggle changed as well.

A. The Meaning of Abortion

Today, Roe is arguably best known for creating backlash. As we will see, however, the decision played an equally important role in redefining the abortion-legalization cause.

1. Lowering the Costs of Dissent

In important ways, the terms of the abortion debate before Roe did not resemble those likely to be familiar to most of us today, as pro-choice activists often avoided the rights-or choice-based frames that now are taken for granted. Instead, groups like the National Abortion Rights Action League (NARAL) were equally likely to adopt population-control frames of the abortion issue. For example, in the early 1970s, a handbook for pro-choice leaders published by NARAL advised activists to explain that "the population explosion compels us to take every means necessary to curb our growth..."
rate" and to contend that "since contraception ... seems insufficient to reduce fertility to the point of our growth, we should permit all voluntary means of birth control [including abortion]." n114 In 1972, the National Organization for [*290] Women (NOW) also began combining its arguments about women's decisional and physical autonomy with claims about the need for population control. n115 After NBC aired an episode of the popular television program Maude involving abortion, Wilma Scott Heide, then-President of NOW, commented at a NOW press conference: "The pressure of populations on world food supplies is coming home to America." n116

For the purpose of political organization and media strategy, leaders of groups like NOW and NARAL pressed members to suppress or downplay some claims about women's rights. For example, in 1969, when NARAL formed to coordinate national efforts to repeal abortion bans, there were already deep divisions between feminists and other pro-choice leaders about how the abortion-legalization cause should be described to the public. n117 At the first meeting of the organization's national Board of Directors, Betty Friedan, a founding member of NARAL and a prominent women's rights advocate, moved that NARAL "should support political groups working toward the basic purpose of the right of a woman to decide when to have or not have children." n118 The motion died for lack of a second. n119 At the same meeting, Larry Lader moved that NARAL resolve that, "to prevent increasing overpopulation, American parents in general ... should adopt the ... principle of the 2-child family." n120 The motion passed 26-18, as did another resolution intended to make clear that "men as well as women have the right to birth control." n121

[*291] Even NOW pressed its members not to focus exclusively on a feminist abortion-legalization frame. In November 1970, Christopher Tietze of the Population Council asked Wilma Scott Heide, then-President of NOW and herself a demographer, if members of NOW who had had abortions would participate in a study on the health effects of abortion on women and the risk factors that would exacerbate those effects. n122 In writing to NOW state affiliates who opposed participating, Heide disagreed, suggesting that "the request from the Population Council represents the fact that we are viewed as responsible and stable." n123

The courts offered the pro-choice movement a place to test frames that movement leaders had sometimes downplayed in the political arena. Of course, several pro-choice briefs in Roe, including the one submitted on behalf of the American College of Obstetricians and Gynecologists and the American Psychiatric Association, still defined the abortion-legalization cause in line with current debate: as gender-neutral, involving "the rights of physicians to administer health care, and of patients to seek medical treatment." n124 However, litigation allowed the feminist wing of the movement to promote a frame that the movement had not stressed in the political domain. Representing a number of women's liberation organizations, including NOW, attorney Norma Zarky entered into the Roe litigation in the hope that the Court would publicize and "reach the fundamental issue of a woman's rights." n125 In another amicus brief on behalf of feminist organizations, Nancy Stearns of the Center for Constitutional Rights explained that Roe offered women the chance to "raise aspects of the constitutional issues before the Court not raised by the parties," especially the equality interests of women involved in abortion legalization. n126 As Stearns explained, reproductive control was central to women's ability to participate equally in society, for "it [was] the woman who [bore] the disproportionate share of the de facto and de jure burdens and penalties [*292] of pregnancy, childbirth, and child-rearing." n127

In drawing on these diverse frames, Roe forged a different definition of the abortion legalization cause. The decision did address the dominant definitions of the cause offered by physicians' groups
and public health organizations. In early drafts and in its final version, Roe and its companion case, Doe v. Bolton, treated abortion legalization as an issue involving the mixed right of the woman and the physician, the right of "the physician, in consultation with his patient, ... to determine, without regulation by the State, that, in his best medical judgment, the patient's pregnancy should be terminated." n130

However, the frame to emerge from Roe also incorporated the claims of feminist attorneys like Zarky and Stearns. As Zarky called for recognition of "a woman's fundamental right to decide for herself whether or not to have a child," n131 the Roe Court emphasized that the constitutional "right of privacy ... is broad enough to encompass a woman's decision whether or not to terminate her pregnancy." n132 In explaining why the abortion decision deserved constitutional protection, the Court also drew on Stearns' account of the unique burdens and anxieties facing women before and after childbirth. n133 Significantly, population control was not made an issue in the Roe decision.

2. Changing Argumentative Strategies

Although a number of race-based and international scandals hurt the population control movement in the late 1970s, Roe played an [*293] important role in deemphasizing population control arguments. After the decision, NARAL operatives were given the following instruction for participating in debates about abortion:

Allegation: That abortion should not be used as a means of population control. [Response]: Agreed... . In a democratic, nonsectarian society, women should be free to make their own decisions regarding childbearing and contraceptive use. The term "population control' implies the use of coercive policies and programs to limit population growth. The United States has no such policy. n135

In the aftermath of Roe, pro-choice organizations began stressing rights-based instead of population control arguments. By 1974, NOW operatives were advised to compare "the Supreme Court['s] ... recognition of the federal constitutional basis for a woman's right to limit childbearing" to the "freedom of religion or freedom of speech." n136 Similarly, following a strategy meeting in 1973, Planned Parenthood activists were told, "an important thematic idea to be stressed is that abortion in a pluralistic society is to be considered as a matter for determination according to personal choice." n137

3. Changing Alliances

As Roe helped to change the arguments made in the abortion debate, the decision also changed the alliances available to the pro-choice movement. That African-Americans as a group at one point were more likely to oppose abortion than other groups is relatively well-known. n138 It is less well-documented that, before Roe, prominent African-Americans suggested that the abortion cause was unjust [*294] primarily because abortion was defined as an issue of population control. n139 For example, Marvin Davies, the Florida field secretary for the NAACP, stated that population control measures were not "in the best interests of the black people." n140

When Roe helped to redefine abortion as a choice-or rights-based issue, the pro-choice movement was more easily able to pursue alliances with African-Americans and civil rights leaders. Jesse Jackson, who had led a war against abortion, had described it as a threat to African-Americans.
But in 1983, when Jackson declared his intention to run for the Democratic presidential nomination, he promised feminist leaders to defend a woman's right to choose abortion. n142

4. Changing Policy Possibilities

As Roe helped to reshape the alliances on either side of the abortion debate, it also helped to redefine the political opportunities available to each side. Between 1974 and 1980, as the fight over the scope of abortion funding bans became increasingly bitter, the pro-choice movement was able for the first time to rely on civil rights advocates in the Senate, like Ted Kennedy and Birch Bayh, to vote down the strict House proposals and to call for funding at the very least in cases of rape, incest, or medical necessity. n143 In 1975, for example, pro-choice leaders expected Kennedy to continue his long-standing, pre-Roe opposition to legalized abortion as a form of population control n144 when the Senate voted on a Medicaid abortion restriction. n145 Because the definitions of abortion had begun to change, Kennedy led the opposition to the restriction and ultimately helped to defeat it that year. n146 After Roe, when debate focused on whether abortion was a constitutional or civil rights issue, leaders like Kennedy helped lead Senate opposition to strict Medicaid bans. n147

Over time, as the new definition of the pro-choice cause became entrenched, Roe may also have helped to reshape popular opinion. There is reason to think that before Roe a significant number of African-Americans viewed the abortion-legalization cause as a population control measure. A February 1971 poll taken by the Chicago Defender found that while only 26.4% of African-Americans generally opposed abortion reform, 63.7% of those polled professed a belief that government-funded abortions could lead to "mass genocide in the black community." n148

When Roe helped to redefine abortion as a choice-or rights-based issue, the pro-choice movement was more easily able to convince African-Americans and civil rights leaders to support legalized abortion. A published study on race and views on abortion confirms this view. n149 Controlling for a variety of factors likely to determine a person's views on abortion, including family income, years of education, region of residence, frequency of church attendance, and religious denomination, the study found that, in the two years before Roe, being African-American was, in its own right, a statistically significant predictor that a person would be opposed to abortion reform. n150 In the period three years after Roe, being African-American was no longer a statistically significant predictor of opposition to legalized abortion. n151

[*296] Roe helped fundamentally to reshape the abortion debate. By helping to redefine the abortion-legalization cause, Roe shifted the argumentative strategies used by either side, the coalitions competing movements could form, and the policy opportunities that each side could pursue. Partly because of Roe, what had been a debate about population growth and physicians' rights was becoming a discussion about women's rights.

B. The Meaning of Same-Sex Marriage

The same-sex marriage struggle has served as the latest target for some critics of change-oriented litigation. Recent scholarship has suggested that state-level litigation has been counterproductive, triggering the passage of restrictive defense-of-marriage legislation and the election of socially conservative politicians. n152 As we will see, however, litigation also helped to change the social meaning of same-sex marriage. In the mid-to-late 1990s, national organizations framed the issue as a referendum on the legitimacy of homosexuality or as a question about the importance of marriage
that was unrelated to sexual orientation. Beginning with the Vermont Supreme Court's decision in Baker v. State, a series of state supreme court decisions helped to de-emphasize these frames and to redefine the same-sex marriage cause as a struggle for civil rights.

In the beginning of the same-sex marriage struggle, litigation served as an important catalyst for subsequent political action. When Hawaii citizens Nina Baehr and Genora Dancel, Joseph Melilo and Patrick Lagon, and Tammy Rodrigues and Antoinette Pregil applied for and were denied marriage licenses, movement organizations refused to participate in litigation challenging the denial. Both the ACLU and the Lambda Legal Defense and Education Fund turned down their requests for assistance; ACLU attorneys later cited serious strategic considerations, including a fear of backlash, as justification for the organization's refusal to take the case.

However, in 1993, the Hawaii Supreme Court in Baehr v. Lewin held that denying same-sex couples marriage licenses involved discrimination on the basis of sex and raised the possibility that the state's opposite-sex marriage restriction would be struck down on remand. The decision itself both reframed debate about same-sex marriage in Hawaii and sparked a framing contest at the national level. Opponents of same-sex marriage fired the first shot in this battle, arguing that the "real issue" for proponents of same-sex marriage was not marriage at all, but rather the legitimacy of homosexuality itself. In 1994, for example, Robert Knight of the conservative Family Research Council told the San Francisco Chronicle that Baehr should be condemned, because it was "part of the pan-sexual movement's attempt to deconstruct mortality in the culture." Other New Right groups adopted a frame similar to Knight's. For example, Reverend Louis Sheldon of the Traditional Values Coalition, a powerful non-denominational church lobby, criticized Baehr by explaining that "what [gays] really wanted was acceptance, and that [was] something we [could not] give them." In other words, according to activists like Knight or Sheldon, the issue was not about the rights sought by gay couples but about the rights that same-sex marriage would take away from everyone else. As Keith Fournier, the Executive Director of the American Center for Law and Justice, the legal wing of Pat Robertson's Christian Coalition, put it, the issue was not whether gays would be given rights but whether "homosexual marriage" would be allowed to attack the family.

In the later 1990s, opponents like Focus on the Family and the Family Research Council created a defense-of-marriage frame at the same time that Congress was debating a federal Defense of Marriage Act (DOMA); this frame suggested that the issue in the same-sex marriage struggle was whether straight marriages should be protected or undermined. Because debate in the late 1990s still turned on the legitimacy of homosexuality, the first national-level, gay rights organizations encouraged their members to hold back any argument based on sexual-orientation discrimination. In July 1995, when the newly formed Freedom to Marry Coalition, an umbrella organization for groups advocating same-sex marriage, met to discuss how best to frame the issue, leaders of the Coalition indicated that a majority of Americans believed, as anti-gay activists argued, that same sex marriage was "not a civil rights issue." Instead of making anti-discrimination claims, the Coalition urged members to stress that "because marriage is a basic ... right and an individual personal choice, ... the State should not interfere with same-gender couples who choose to marry." A similar approach was taken by the Human Rights Campaign, a prominent gay-rights political action committee.
campaign advised activists not to make equality-based or civil rights arguments but to argue instead that "adults should be free to choose the person with whom they want to spend their lives." n172

[*300]

1. Lowering the Cost of Dissent

For grassroots and regional activists in Vermont, the courts offered a forum where the gay rights movement's definition of the same-sex marriage cause could be challenged, reworked, and supplemented. In 1995, grassroots organizers Beth Robinson and Susan Murray founded a Vermont Freedom to Marry Task Force, n173 and by 1997, joined Mary Bonauto of the Gay and Lesbian Defenders (GLAD), a New England-based regional gay-rights organization, in mounting a constitutional challenge to Vermont's marriage law. n174

Robinson, Murray, and Bonauto used the courts as a place to redefine the same-sex marriage cause as one involving the equality interests of gays and their wish not to be subjected to sex role stereotypes. At a press conference in November 1998, Bonauto explained that Baker was "about what ... Vermont's guarantees of equality mean for Vermont citizens." n175 At a Freedom to Marry rally the following February, Deborah Lashman, an attorney and prominent member of the Vermont Freedom to Marry Coalition, explained that the issue was whether, based on sex stereotypes, the Vermont Constitution allowed "the Legislature to single out a class of families for adverse treatment." n176

By partly endorsing the equality-based frame advanced by Vermont Freedom to Marry, Baker helped to redefine the same-sex marriage cause. While rejecting Bonauto's sex-stereotype argument, the Vermont Supreme Court reasoned that the petitioners' sexual orientation, and the public's tolerance of it, had to be considered central issues in the case. n177 But the court also drew on the frame proposed by Bonauto and Robinson, explaining that the petitioners were entitled to relief as couples, because same-sex couples were "entitled under Chapter I, Article 7, of the Vermont Constitution to obtain the same benefits and protections afforded by Vermont law to married opposite-sex couples." n178

[*301]

2. Changing Arguments

The history of the same-sex marriage struggle in the years after Baker shows how courts can, as Robert Cover puts it, "kill" frames, suggesting that one is correct and implicitly dismissing the rest. n179 When Goodridge, a challenge to a Massachusetts opposite-sex marriage restriction, was pending in the Massachusetts Supreme Judicial Court in 2003, the equality-based frame used in Baker was only one of several put forth by gay rights activists. After the Supreme Court struck down a Texas sodomy ban that year in Lawrence v. Texas, n180 Kevin Cathcart of Lambda Legal, a gay rights litigation and education fund, promised that marriage would be the next step in what was a fight for "real equality [for] gay people." n181 By contrast, other members of the Freedom to Marry Coalition described the marriage struggle after Lawrence as one for privacy, arguing that, after the decision, "non-gay Americans are coming to understand that... including the police in our bedrooms is wrong." n182

Goodridge helped to shift the argumentative strategies these advocates adopted. Writing for a four-justice majority, Chief Justice Margaret Marshall explained that Goodridge was both an equal-
Goodridge helped change the arguments that defined the national same-sex marriage debate. The Freedom to Marry Coalition first considered the effect of Goodridge on its strategy in November 2003, at a staff meeting on civil marriage. Most of the arguments drew on the civil-rights and equality-based rhetoric used by the Goodridge Court. One staff member suggested linking the victories of the "marriage equality movement" and "other civil rights advances, such as Brown v. Board of Education." In its new campaign against a federal constitutional ban on same-sex marriage, the Human Rights Campaign also borrowed the civil-rights and equality-based rhetoric of Goodridge. The Campaign claimed that "settling for anything less than full and equal marriage rights means settling for treatment as second-class citizens." By reshaping one side of movement-countermovement dialogue, Goodridge also encouraged opponents of same-sex marriage to reformulate their arguments against the cause. As we have seen, between 1996 and 2003, opponents of same-sex marriage spoke about what made same-sex couples intrinsically unequal, inferior, or immoral. As Richard Cizik of the National Association of Evangelicals reiterated in 2003, "what a lot of leaders of the gay community want is for [evangelicals] to stop preaching that homosexuality is a sin." This, Cizik explained, was a compromise evangelicals would not make.

By reframing the debate, Goodridge helped marginalize some of these arguments. In 2004, as a part of their campaign to have Goodridge overruled or limited in its effect, same-sex marriage opponents in Massachusetts made more comprehensive efforts to change their argumentative strategy. In May, Reverend Kristian Mineau, one of the leading opponents of Goodridge in Massachusetts, denounced "anti-gay groups, the homophobic groups" for "discrediting" opposition to same-sex marriage. Similarly, in the fall of 2006, when the Family Research Council held a rally in Boston for evangelical groups and politicians opposed to same-sex marriage, leaders at the rally did not criticize homosexuality directly. Instead, they joined Tony Perkins of the Council in arguing that the advancement of same-sex marriage threatened religious liberties.

It is worth noting that some state-level decisions following Goodridge shifted the balance of arguments in this way whether or not these decisions also inspired backlash. Perhaps the clearest example here can be drawn from the recent history of Proposition Eight, a state constitutional referendum banning same-sex marriage and overruling the holding in Marriage Cases. In 2008, in In re Marriage Cases, the California Supreme Court struck down the state's opposite-sex marriage restriction, basing its decision on state equal-protection doctrine and emphasizing the close ties between the civil rights and same-sex marriage movements.

That the decision produced a well-organized backlash is well-documented. However, after the decision, state-level organizations such as Protect Marriage that led the campaign for Proposition Eight did not as often emphasize that homosexuality was unnatural or deserving of condemnation. Nor did the groups frequently stress defense-of-marriage arguments or claims about the unique benefits of heterosexual marriage. Instead, Protect Marriage and national groups like the National Organization for Marriage framed same-sex marriage as a threat to reli-
gious liberty and the freedom of parents to control the education of their children. Protect Marriage explained that Proposition Eight was necessary, because public "schools [would] be required to teach students that gay marriage [was] the same as traditional marriage." n203 Another state-based group argued in support of Proposition Eight, because "churches may have their tax exempt status ... if they publicly oppose same-sex marriage." n204 The National Organization for Marriage, a prominent anti-gay group, told its activists to "avoid at all costs" emphasizing a "ban [on] same-sex marriage" instead of stressing claims about religious liberty and public school education. n205 Between 1999 and 2006, even though roughly the same proportion of Americans believed that homosexuality was acceptable (between about 62% and 56%), n206 the argument that gay couples were unequal and immoral no longer played as central a role in the same-sex marriage debate after Goodridge.

3. Changing Alliances

As Goodridge shifted the arguments made by each side, the decision also created new alliance-making opportunities. In the years before Goodridge, the gay-rights movement framed the same-sex marriage debate as either an employment-discrimination issue or as a question of constitutional privacy. While GLAD and the Massachusetts Gay and Lesbian Political Caucus (MGLPC) focused on passing a bill recognizing same-sex relationships for the purpose of state-employee insurance, n207 activists argued that domestic partnerships were "an issue ... about equal pay for equal work." n208 Before Goodridge, MGLPC, GLAD, and their allies also stressed that same-sex marriage was an issue of constitutional privacy. n209 When a state Defense of Marriage bill was filed, GLAD and MGLPC expressed some approval of a competing bill filed by libertarian organizations that: (1) abolished restrictions on same-sex marriage and plural marriages; and (2) eliminated any laws punishing "bedroom crimes." n210 Partly for this reason, in 2000, the Massachusetts Freedom to Marry Coalition counted as "existing coalition partners" several unions, including the National Association of Social Workers, as well as the Libertarian Party. n211 Organizations such as the NAACP, the Hispanic Bar, or Japanese Association that campaigned for the rights of racial or ethnic minorities were only "prospective" allies. n212

When Goodridge helped to reframe the same-sex marriage cause as one involving civil rights, the same-sex marriage movement was able to win different allies. Although a number of historically African-American churches had come out against Goodridge and its constitutional justification for same-sex marriage in the winter of 2004, n213 other civil rights leaders, like Julian Bond of the NAACP and members of the National Black Justice Coalition, joined the debate in support of "marriage equality." n214 In December 2004, Coretta Scott King and other members of the civil rights movement began publicly supporting the same-sex marriage movement and its claims of constitutional equality. n215 In the winter of 2005, Mark Leno, another prominent civil rights leader and pastor, proposed a same-sex marriage bill in the California Legislature. n216 When asked why he supported the measure, Leno explained that the bill should be endorsed by anyone "calling for equality." n217

4. Changing Policy Possibilities?

These shifting arguments in the same-sex marriage debate also may have helped to produce a change in popular opinion. Of course, a considerable amount of the shift in opinion on same-sex marriage may be attributable to generational turnover and longer-term political trends. n218 Nonetheless, in the wake of the California Supreme Court's opinion in In re Marriage Cases, for example,
California's Field Poll showed that there had been a dramatic increase in support for same-sex marriage among racial minorities between 2006 and 2008. In May 2006, only 35% of Latinos expressed support for same-sex marriage. By May 2008, after the decision of Marriage Cases, support among Latinos rose as high as 49%. After the intensive get-out-the-vote efforts sponsored by the Mormon and Catholic Churches, only 53% of Hispanics voted for Proposition Eight.

Even among African-Americans, In re Marriage Cases may have prompted an increase in approval of same-sex marriage. Through 2006, almost 80% of African-Americans polled in California opposed same-sex marriage. By 2008, when Californians voted on Proposition Eight, only 53% voted in favor. However slowly views are changing, there has been a striking shift in opinion among African-Americans in a very brief period after Marriage Cases.

The series of decisions from Baker to Marriage Cases helped to marginalize arguments that deemphasized sexual-orientation discrimination. Similarly, these decisions helped to downplay contentions that homosexuality was immoral or that it posed a danger to "traditional" marriage. Over time, as these decisions shifted the terms of debate, the potential allies available to the gay rights movement changed as well. These decisions did this work, not as litigation's critics would predict, by convincing the public to accept the legitimacy of a movement's complaint. Instead, these decisions affected the way that citizens made sense of the legal and political issues involved in the same-sex marriage struggle.

V. Reexamining the Value of Litigation

In studying the history of the same-sex marriage and abortion struggles, we might be tempted to assume that the terms of discussion have remained relatively stable over time. Nonetheless, the case studies considered here suggest that this would be a mistake. Because litigation's critics ignore the ways in which judicial decisions redefine movement causes, their theories discount important advantages of going to court. As the history studied here suggests, litigation sometimes offers movements framing opportunities that might not be available through ordinary politics.

First, unlike public protest or political lobbying, litigation may sometimes allow movement members to offer a rich range of competing or complementary frames. Before Roe, as we have seen, pro-choice leaders like Lader and Nellis cited strategic reasons for deemphasizing women's-rights claims in the political arena. Through the use of amicus briefs, advocates like Stearns and Zarky effectively used the litigation of Roe to advance alternative women's-right frames that were not sometimes thought to be strategically wise in the political domain. Moreover, Sarah Weddington, counsel for Jane Roe, took advantage of liberal pleading rules to offer both physicians'-rights and feminist frames of the abortion issue.

Similarly, we have seen that the courts offered grassroots and regional gay rights groups a forum to challenge and supplement the frames offered by national-level groups in the same-sex marriage struggle. In the political arena, as we have seen, national gay rights organizations trained activists to speak with a single voice, discouraging lobbyists and political operatives from offering alternative equality-or anti-discrimination-based frames. Beth Robinson, Mary Bonaudo, and Vermont Freedom to Marry used the litigation of Baker to promote an alternative, anti-discrimination frame.

Second, by comparison to direct action protest, litigation may sometimes be a less strategically risky way to publicize a movement's frame. A movement may pay a high price if it adopts alternative strategies for winning media attention, such as recruiting a charismatic leader or staging dra-
matic protests. n227 Because the media cover controversial judicial opinions, especially those on social issues and civil rights, the courts may offer a less risky way of publicizing a movement's frame. n228 By attracting controversy, a judicial decision will focus media attention on a court's work product. n229 When the public turns its attention to a different set of issues, the court's decision may effectively change the definition of a movement's cause.

The history considered here also suggests that there is a good deal at stake when the definition of a grievance shifts. First, this history suggests that a judicial decision may help to shift the balance of arguments that defines a debate. We have seen that Roe deemphasized population control claims and helped to privilege contentions about women's abortion rights. The decision encouraged advocates to argue, as NARAL operatives were instructed, that "women should be free to make their own decisions regarding childbearing and contraceptive use." n230 Similarly, as we have seen, a series of state decisions helped to raise the prominence of equality-based claims about same-sex marriage. Because of decisions like Goodridge, national groups that once told [*309] members not to mention "civil rights" later told activists to argue that "settling for anything less than full and equal marriage rights means settling for treatment as second-class citizens." n231

Moreover, as the terms of a debate change, different coalition-building opportunities may become available to each side as well. After Roe, as we have seen, the pro-choice movement was able for the first time to build an effective partnership with civil rights leaders like Jesse Jackson and Ted Kennedy. Similarly, as Goodridge shifted the definition of the same-sex marriage cause, the gay rights movement was able for the first time to win important civil rights allies like Julian Bond and Coretta Scott King.

Thus, the history of the abortion and same-sex marriage struggles suggests that there is much more at stake in the definition of a movement's cause than might be supposed by litigation's critics. First, as the social meaning of a movement's grievance changes, the policy opportunities available to that group may narrow or expand. For example, we have seen how the changing definition of abortion helped the pro-choice movement win allies in Congress who helped to fight against strict Medicaid abortion bans. Second, the history considered thus far implies that the evolving definition of a cause may reshape popular opinion. Over time, after decisions like Goodridge and Marriage Cases helped to redefine the same-sex marriage cause, support for the practice among some racial minorities may have increased. n232 Similarly, there is evidence that, as Roe deemphasized population control arguments, African-Americans became more likely to support legalized abortion. n233

Litigation's critics assume a model of the relationship between law and social change fundamentally different from the one described here. This model hypothesizes that law primarily reflects popular mores. Building on this premise, the model next assumes that social change occurs only when popular approval of a practice increases. Consequently, litigation's critics reason that litigation is valuable only when it suppresses outliers or cleans up after any major social change has already taken place.

However, the history considered here suggests that this model is oversimplified. And if the model of social change assumed by these [*310] scholars is incomplete, there may be reason to question their normative conclusions. Of course, the history studied here does not suggest that litigation will always be a wise strategic choice for a movement or countermovement with limited resources. But constitutional framing does suggest that it may still be worthwhile to seek change through litigation. Although we may be aware of reasons not to rely on judicial decisions, we should be equally careful not to blind ourselves to the opportunities still available in the courts.
VI. Conclusion

Theory to date has increasingly shaken confidence in litigation as a tool for social change. Although scholars criticize change-oriented litigation for different reasons, they work from a shared model of the relationship between legal and social change. This model first proposes that law merely reflects social mores. For this reason, the next hypothesis holds that, by striking down already unpopular laws, the courts act only after social change has taken place. Finally, the model suggests that social change begins not when the courts issue a decision but only when the public begins accepting the legitimacy of a movement's cause.

As we have seen from the history of the abortion and same-sex marriage struggles, this is not the only way we should describe the relationship between legal and social change. Contrary to the reflectionist hypothesis, the courts not only mirror popular opinion but also serve as a place where movements challenge the existing definitions of their causes and where new definitions of movement grievance emerge. Contrary to the clean-up hypothesis, constitutional framing shows that the courts implement already popular remedies and reshape the terms of the debates and the coalitions participating in them. And contrary to the cause-acceptance hypothesis, constitutional framing suggests that social change may begin both when the public begins accepting the justness of a movement's cause and when that cause is labeled differently.

What, then, in the end, is the lesson of framing for social movements working for constitutional change? It is perhaps that we should not expect too much from constitutional litigation, but neither should we expect too little. For issues of constitutional law like abortion or same-sex marriage can often be defined in a number of different ways, and these definitions may provoke varying reactions. Whether we support a cause will depend in large part on what we understand that cause to be.

FOOTNOTES:

n1. For coverage of the impact of Proposition Eight and the controversy it generated, see Janet Kornblum, Gay Marriage Backers Step Up Protests, USA Today, Nov. 14, 2008, at 3A. Recent debate about the value of change-based litigation echoes an earlier debate about what Abram Chayes called "public law litigation." See generally Abram Chayes, The Role of the Judge in Public Law Litigation, 89 Harv. L. Rev. 1281, 1288-1304 (1976). Scholars like Chayes and Owen Fiss proposed that litigation could be used to challenge the structure of public schools, prisons, and other public institutions by generating broad remedies and monitoring institutional compliance. See id. at 1302-04; Owen Fiss, Foreword: The Forms of Justice, 93 Harv. L. Rev. 1, 18, 28, 44 (1979). Early critics of public law litigation primarily questioned whether the courts had the institutional competence to craft the kind of remedies described by Chayes. See, e.g., Alexander M. Bickel, The Supreme Court and the Idea of Progress 134 (1970). Recent scholarship has proposed alternatives to the style of change-oriented litigation stressed by Fiss and Chayes. Charles Sabel and William Simon propose a
kind of "experimentalist" public law litigation, in which the courts: (1) destabilize existing practices and institutional arrangements by legitimating a plaintiff's claim; (2) create general performance standards for the parties; and (3) act as monitoring bodies to ensure institutional accountability. See Charles F. Sabel & William H. Simon, Destabilization Rights: How Public Law Litigation Succeeds, 117 Harv. L. Rev. 1015, 1035-36, 1076 (2004). Jules Lobel has suggested that social movements can use the courts as a forum for protest. See Jules Lobel, Courts as Forums for Protest, 52 UCLA L. Rev. 477, 479-80 (2004).

n3. See Michael J. Klarman, Brown and Lawrence (and Goodridge), 104 Mich. L. Rev. 431, 478-79 (2005) (explaining that backlashes are averted only when most Americans are already willing to accept a result). Of course, several scholars have responded that same-sex marriage litigation has some benefits. See, e.g., William N. Eskridge Jr., Equality Practice: Civil Unions and the Future of Gay Rights 26, 45 (2002) (explaining that marriage litigation has inspired gay rights activists and has helpfully raised expectations); see also Daniel R. Pi-
nello, America's Struggle for Same Sex Marriage 192-93 (2006); Thomas M. Keck, Beyond Backlash: Assessing the Impact of Judicial Decisions on LGBT Rights, 43 Law. & Soc'y. Rev. 151, 158-60 (2009). Keck has most recently argued that judicial decisions: (1) put same-sex marriage on state and national legislative agendas; (2) "pushed the policy envelope" in such a way as to make previously "radical" proposals seem "moderate;" (3) provided cover for legislators sympathetic to the LGBT cause; and (4) created constituencies willing to tolerate or support same-sex marriage. Id. at 158-60. Keck argues that judicial decisions create new constituencies by showing the public that same-sex marriage does not have negative societal effects. Id. at 159-60. Once a decision is in place, the public sees that it has nothing to fear, and popular support for same-sex marriage increases. By contrast, constitutional framing creates new coalition-building opportunities by changing how the public defines a grievance.

n4. See Eskridge, supra note 3, at 206-223 (surveying progressive or queer-theory arguments against same-sex marriage litigation); see also Michael Warner, The Trouble With Normal: Sex, Politics, and The Ethics of Queer Life (1999). Other critics sympathetic to the same-sex marriage movement have criticized organizers' focus on litigation by pointing to the backlash it creates. See, e.g., Craig A. Rimmerman, From Identity to Politics: The Lesbian and Gay Movements in the United States 78 (2002); John D'Emilio, Will the Courts Set Us Free? Reflections on the Campaign for Same-Sex Marriage, in The Politics of Same Sex Marriage 39 (Craig A. Rimmerman & Clyde Wilcox eds., 2007).

n7. See, e.g., Robert Post, Law and Cultural Conflict, 78 Chi.-Kent. L. Rev. 485, 486-89 (2003) (summarizing positions taken in contemporary legal anthropology debate). According to Post, legal anthropology scholars traditionally argued that law reflects and enforces popular values. See id. More recently, Post suggests, other scholars have contended that law actually influences and helps to produce those values. See id. at 488-90.

n8. Rosenberg, supra note 2, at 35.
n9. Rosenberg's account draws in part on the intuitions of legal mobilization scholars that "the bounded nature of constitutional rights prevents courts from hearing or acting on many significant social reform claims." Id. at 13. For key examples of legal mobilization scholarship, see note 54 and accompanying text. In asserting that "Supreme Court decisions ... have seldom strayed far from what was politically acceptable," Rosenberg's argument also foreshadows the work of scholars like Barry Friedman. Id. at 13; accord Barry Friedman, Dialogue and Judicial Review, 91 Mich. L. Rev. 577 (1993); Barry Friedman, The Importance of Being Positive: The Nature and Function of Judicial Review, 72 U. Cin. L. Rev. 1257, 1257-59 (2004). Rosenberg has elaborated his argument about courts' inability to produce social change on several occasions. See, e.g., Gerald N. Rosenberg, Courting Disaster: Looking for Change in All the Wrong Places, 54 Drake L. Rev. 795, 796 (2006) (arguing that the courts traditionally defend status and privilege instead of promoting social change); Gerald N. Rosenberg, The Irrelevant Court: The Supreme Court's Inability to Influence Popular Beliefs About Equality (Or Anything Else), in Redefining Equality 172, 172-88 (Neal Devins & Davidson M. Douglas eds., 1998) (arguing that the Court's decisions do not affect popular opinion about racial or gender equality).

n10. Rosenberg, supra note 2, at 16.

n11. Id.

n12. Id. at 7.

n13. Id. at 236, 241.

n14. Id. at 241.

n15. Klarman, supra note 3, at 482; see also Michael Klarman, The Racial Origins of Modern Criminal Procedure, 99 Mich. L. Rev. 48, 96 (2000) (arguing that "the most significant effect of Brown v. Board of Education may have been neither its educational influence on white northerners nor its motivational impact on African Americans, but rather its crystallization of southern white resistance").

n16. See Klarman, supra note 3, at 481-82.

n17. Michael J. Klarman, From Jim Crow to Civil Rights: The Supreme Court and the Struggle for Racial Equality 364 (2004). It is worth distinguishing framing from what Klarman identifies as the salience-raising effects of judicial decisions. See id. By raising the salience of an issue, a decision forces people to take sides on an issue for the first time. See id. By contrast, framing often draws attention to a different aspect of an issue on which people have already taken a position and encourages them to reformulate their opinion on that basis.
n18. See Klarman, supra note 3, at 473.

n19. Klarman, supra note 17, at 365; see also Michael J. Klarman, Fidelity, Indeterminancy, and the Problem of Constitutional Evil, 65 Fordham L. Rev. 1739, 1750 (1997) (finding to be contestable the proposition that Supreme Court opinions educate "public opinion ... in a positive direction").

n20. Brown-Nagin, supra note 2, at 1439.

n38. Klarman, supra note 17, at 468.

n40. Channeling, supra note 28, at 500; see also Rosenberg, supra note 2, at 16 (arguing that the courts will not be able to enforce their decisions unless a movement wins "popular support to implement their decisions"); Klarman, supra note 3, at 482 (explaining that backlashes occur because the courts cannot change popular opinion and in fact undermine movement causes when decisions "outpace public opinion").

n41. See, e.g., Brown-Nagin, supra note 2, at 1504.

n42. See Charles Tilly, Social Movements, 1768-2004, at 1-14 (2004) (discussing movements' political protest repertoire); see also Jo Freeman, A Model for Analyzing the Strategic Options for Social Movement Organizations, in Waves of Protest: Social Movements Since the Sixties 221, 226-27 (Jo Freeman & Victoria Johnson eds., 1999) (explaining the tactics of formally organized social movement organizations); Eric Hirsh, Sacrifice for the Cause: Group Processes, Recruitment, and Commitment in a Student Social Movement, in Waves of Protest, supra, at 47, 47-57 (explaining blockade tactics).

n43. See, e.g., Brown-Nagin, supra note 2, at 1508 ("Progressive social movements are instances of insurgent political activity ... that are unmediated by the state.").

n44. Id. at 1527.

n45. Rosenberg, supra note 2, at 265; see also Channeling, supra note 28, at 501-03 (explaining that social change occurs when a new "national consensus develops").

n47. Cf. Robert Post, Law Professors and Political Scientists: Observations on the Law/Politics Distinction in the Guinier/Rosenberg Debate, 89 B.U. L. Rev. 581, 583 (2009) (arguing that theory about the irrelevance of judicial decisions views law as influential "only when its substance is widely known or only when it is a necessary or sufficient cause for measurable changes in public opinion").

n48. See Rosenberg, supra note 2, at 427.

n49. Channeling, supra note 28, at 501; see also Klarman, supra note 3, at 445 (explaining that Brown and Lawrence did "support[] movements that had already acquired significant momentum"); cf. Brown-Nagin, supra note 2, at 1516-21 (suggesting that movements may, with varying degrees of success, use litigation to inspire movement members while focusing on protest and public persuasion).

n50. Klarman, supra note 3 at 483.

n51. Brown-Nagin, supra note 2, at 1445; see also Michael J. Klarman, Rethinking the Civil Rights and Civil Liberties Revolutions, 82 Va. L. Rev. 1, 16-17 (1996).

n52. 347 U.S. 483 (1954).

n54. See id. (arguing that the Supreme Court "has acted as the legitimator of the government").

n56. See Post, supra note 47, at 583.

n57. See Gerald Rosenberg, Romancing the Court, 89 B.U. L. Rev. 563, 566-67 (2009) (explaining that most Americans cannot explain the holding of Roe and arguing that this fact provides evidence that "most Americans do not have a clue as to what the Court is doing or has done").

n58. See, e.g., infra notes 59-60.

n59. See, e.g., Klarman, supra note 17, at 367 (arguing that the Supreme Court has not "educated" the public to support the outcome of its decisions on issues like the death penalty and abortion).

n60. See supra text accompanying notes 20-21.

n61. See, e.g., Rosenberg, supra note 2, at 10-21.

n63. Peter Hanson, Flag Burning, in Public Opinion and Constitutional Controversy 184, 199 (Nathan Persily et al. eds., 2008) ("In the two decades since Texas v. Johnson, public opposition to flag burning has not changed.").

n64. John Hanley, The Death Penalty, in Public Opinion, supra note 63, at 180, 135 ("In the 1970s, the Supreme Court appears to have had an impact on opinion, bolstering anti-death penalty sentiment among more-educated Americans ... ").

n65. See, e.g., Paul Schiff Berman, The Cultural Life of Capital Punishment: Surveying the Benefits of a Cultural Analysis of Law, 102 Colum. L. Rev. 1129, 1140 (2002) (essay review) (arguing that legal discourse offers a framework "through which individuals in society come to apprehend reality"); Austin Sarat, Redirecting Legal Scholarship in Law Schools, 12 Yale J.L. & Human. 129, 134 (2000) (book review) (explaining that law helps to constitute citizens' daily experiences "by providing the principal categories in terms of which social life is made to seem largely natural, normal, cohesive, and coherent"). Although it describes the ways in which law can help people to label and understand their experiences, sociolegal scholarship does not per se address the relationship between legal and social change or discuss the value of cause-based litigation, as constitutional framing does.

n67. See, e.g., David A. Snow & Doug McAdam, Identity Work Processes in the Context of Social Movements: Clarifying the Identity/Movement Nexus, in Self, Identity, and Social Movements 41, 52-53 (Sheldon Stryker et al. eds., 2000) (arguing that before individuals become willing to "act on behalf of and in concert with a movement - it is necessary that their personal identities dovetail with a movement's collective identity"); Verta Taylor & Nancy E. Whittier, Collective Identity in Social Movement Communities: Lesbian Feminist Mobilization, in Frontiers in Social Movement Theory 104, 105 (Aldon D. Morris & Carol McClurg Mueller eds., 1992) (arguing that "identity construction processes are crucial to grievance interpretation in all forms of collective action"); see also William A. Gamson, Talking Politics 84-86 (1992) (explaining the importance of identity and cause-framing to collective action); Russell J. Dalton et al., The Challenge of New Movements, in Challenging The Political Order: New Social and Political Movements in Western Democracies 1, 3-22 (Russell J. Dalton & Manfred Kuechler eds., 1990) (explaining the importance of identity and cause-framing to collective action).

n69. See infra note 70 and accompanying text.

n70. Doug McAdam, Culture and Social Movements, in New Social Movements: From Ideology to Identity 36, 42 (Enrique Larana et al. eds., 1994).

n71. See, e.g., Sidney G. Tarrow, Power in Movement: Social Movements and Contentious Politics 110 (2d ed. 2002) (describing framing contests as struggles for "cultural supremacy"); Doug McAdam et al., Introduction, in Comparative Perspectives on Social Movements 1, 16 (Doug Adams et al. eds., 1996) (describing framing battles as involving "intense contestation between ... the movement, the state, and any existing countermovement").

n72. See, e.g., Joseph R. Gusfield, The Reflexivity of Social Movements: Collective Behavior and Mass Society Theory Revisited, in New Social Movements, supra note 70, at 58, 69 ("Awareness that norms and meanings are at issue and in contestation is itself a step in the development of change.").

n73. See Helen S. Shapo et al., Writing and Analysis in the Law 305 (4th ed. 1999) (stressing the importance of "framing the question so that it suggests a response in [one's] favor").
n74. Gusfield, supra note 72, at 70.

n75. Doug McAdam, The Framing Function of Movement Tactics: Strategic Dramaturgy in the American Civil Rights Movement, in Comparative Perspectives, supra note 71, at 338, 345. William Gamson has argued that "the mass media arena is the major site of contests over meaning." William A. Gamson, Bystanders, Public Opinion, and the Media, in The Blackwell Companion To Social Movements 242, 243 (David A. Snow et al. eds., 2004).

n76. Doug McAdam, Movement Strategy and Dramaturgic Framing in Democratic States: The Case of the American Civil Rights Movement, in Deliberation, Democracy and the Media 117, 125 (Simone Chambers & Anne Costain eds., 2000).

n77. See, e.g., Gamson, supra note 75, at 252.

n78. See, e.g., Patricia Bradley, Mass Media and the Shaping of American Feminism 1963-1975, at 253 (2003) (showing that media coverage of the feminist movement gradually focused on "internal divisions" rather than the frame promoted by movement leaders); Todd Gitlin, The Whole World is Watching: Mass Media in the Making and Unmaking of the New Left 114-15 (1980) (examining how media coverage of divisions within the New Left student movement undermined the group's ability to spread its message). There is reason to believe that social movements and conservative countermovements would face similar risks, since "internal rivalries can attract attention to a movement, but the coverage is about the rivalry, not issues and events" relevant to the movement. Stephanie Greco Larson, Media & Minorities: The Politics of Race in News and Entertainment 149 (2006).

n79. See, e.g., Gamson, supra note 75, at 247 ("Competition among frames within a movement about which one should be promoted and emphasized is one major component of a frame-critical analysis of movements.").

n81. The relevant rules on the submission of amicus briefs may appear restrictive. United States Supreme Court Rule 37, for example, requires that an amicus brief "bring[] to the attention of the court relevant matters not already brought to attention by the parties ... ." Sup. Ct. R. 37; see also Fed. R. App. P. 29 (requiring consent of the parties for the submission of amicus briefs). In practice, however, the courts are generally liberal in accepting amicus briefs. See, e.g., 4 Am. Jur. 2d Amicus Curiae § 6 (2007) (explaining that "the trend, particularly in appellate courts, is to accept and even invite the participation of amici curiae"); Ruben J. Garcia, A Democratic Theory of Amicus Advocacy, 35 Fla. St. U. L. Rev. 315, 326 (2008) (showing that "courts do not often reject amicus briefs").
n82. For arguments that controversial decisions raise the salience of issues, see, for example, Klarman, supra note 3, at 473 and Margaret Meriwether Cordray & Richard Cordy, Setting the Social Agenda: Deciding to Review High-Profile Cases at the Supreme Court, 57 U. Kan. L. Rev. 313, 313 (2009).

n83. See Frederick Schauer, Foreword: The Court's Agenda - And the Nation's, 120 Harv. L. Rev. 4, 11-12 (2006).

n84. See supra note 57 and accompanying text.

n85. See, e.g., Jeremy D. Mayer, Introduction to Media Power, Media Politics 1, 10 (Mark J. Rozell & Jeremy D. Mayer eds., 2d ed. 2008) ("The media's most invidious power is the ability to control what gets reported and whose voice is heard in that story"); Gamson, supra note 75, at 254 (emphasizing the central importance of media access to successful framing efforts).

n86. Gamson, supra note 75, at 254.

n87. See, e.g., Donatella Della Porta & Mario Diani, Social Movements: An Introduction 178 (2d ed. 2006) (describing the use of guerilla theater and direct action protest to promote a movement's frame); Gamson, supra note 75, at 187 (emphasizing the recruitment of a leader as a tool to publicize a movement's frame).

n88. See Gamson, supra note 75, at 254.

n89. See Gitlin, supra note 78, at 148-80.

n90. Gamson, supra note 75, at 252.

n91. See Doris A. Graber, Mass Media and American Politics 289 (7th ed. 2006) (arguing that, while the press relatively infrequently covers the courts, judicial decisions make news when the Court addresses emotional issues or subjects that have major consequences for the political system).

n92. Mayer, supra note 85, at 9 (stating that some scholars believe press coverage of the Court is "almost entirely focused on the Court's work product"); see also Elliot E. Slotnick & Jennifer A. Segal, Television News and the Supreme Court: All the News That's Fit to Air? 10, 13 (1998) (offering evidence that the media focus on the result of a decision and the public reaction to it).

n97. Sowell, supra note 95, at 15.

n101. Morris Abram, a civil rights leader and prominent opponent of affirmative action, argued in favor of "remedial action" such as job training for the disadvantaged, as an alternative to quotas. See, e.g., David A. Drachsler, What's All This About "Quotas'?, Wash. Post, Aug. 7, 1983, at C8 (arguing that opponents of affirmative action used the "quota" label as a tool in generating opposition); Jack Rosenthal, Editorial, Morris Abram, LBJ, and Neutrality, N.Y. Times, July 17, 1983, at 20E. Even pollsters began focusing on public views of "quotas" versus other forms of affirmative action. See Lindsey Gruson, Survey Finds 73% Oppose Racial Quotas in Hiring, N.Y. Times, Sept. 25, 1983, at 29.

n103. See Tom Sherwood, U.S. Justice Official Rejects Racial Quotas as Quick Fix for Bias, Wash. Post, Oct. 6, 1983, at B10. By the winter of 1983, however, civil rights groups were already arguing that the Reagan Administration opposed all affirmative action. See Mil-

n105. See Klarman, supra note 17, at 386-87.

n106. See id.

n107. See id.

n108. See Schauer, supra note 83, at 50 (arguing that the Court's docket consists primarily of low-salience issues).

n110. See, e.g., Sherwood, supra note 103, at B10 (relating support of the Reagan Administration's approval of "race neutral affirmative action").

n111. See, e.g., Brown-Nagin, supra note 2, at 1442-43.

n112. 798 N.E.2d 941 (Mass. 2003).

n113. See Robert Post & Reva Siegel, Roe Rage: Democratic Constitutionalism and Backlash, 42 Harv. C.R.-C.L. L. Rev. 373, 406 (2007) (arguing that concern about the backlash produced by Roe defines much progressive scholarship about the decision).

n114. NARAL Speaker and Debater's Handbook Excerpt (1972), in The NARAL Papers [hereinafter NARAL Papers] (on file with the Schlesinger Library, Harvard University). Conservatives within the pro-choice movement had strategic reasons for characterizing the abortion-legalization cause as one involving population control or gender-neutral physicians' rights. Population control arguments associated abortion legalization with reforms that enjoyed bipartisan support in Congress, such as the bill creating a National Center for Population and Family Planning in the Department of Health, Education, and Welfare. See Ernest Ferguson, Zero Population Growth Isn't Zero, L.A. Times, Jan. 30, 1972, at 17. Another rea-
son to rely on population-control or physicians' rights arguments was the perceived radicalism or controversy associated with women's rights claims for abortion legalization. As Joseph Nellis of NARAL explained, "courts would more easily strike down state anti-abortion laws if the test case were presented in terms of interference with the physician's practice of medicine than if it were done on the basis that many women's rights groups have advocated - namely ... the right of a woman to control her own body." Eileen Shanahan, Doctor Leads Group's Challenge to Michigan Anti-Abortion Law, N.Y. Times, October 5, 1971, at 28.

n129. See Roe, 410 U.S. at 153.

n130. Id. at 163.

n131. See Lilliston, supra note 125, at F1.

n133. Id. In particular, the Court explained: "Maternity, or additional offspring, may force upon the woman a distressful life and future ... . Mental and physical health may be taxed by child care." Id.

n134. Several developments in the mid-to-late 1970s set back the movement for population control. In 1973, the revelation that two African-American teenage girls in Alabama had been involuntarily sterilized created a scandal that set off a wave of lawsuits and accusations about sterilization abuse and its connection to the population control movement. See Nadine Brozán, The Volatile Issue of Sterilization Abuse: A Tangle of Accusations and Remedies, N.Y. Times, Dec. 9, 1977, at B10. In the mid-1970s, Third World leaders, no longer willing to participate in population control programs, began arguing that population control policies had been motivated not by humanitarian concern but by racism or colonial economic interests. See, e.g., Population Parley of UN May Ignore Population Growth, Wall St. J., Aug. 27, 1974, at 32.

n137. See Ziegler, supra note 135, at 309 (quoting The Denver Conference Memorandum (Nov. 2, 1973), in NARAL Papers, supra note 114 (on file with the Schlesinger Library, Harvard University)).

n138. Earlier studies of popular opinion on abortion found a more pronounced difference in opinion between African-Americans and whites regarding abortion; when studies control for religiosity, a less meaningful distinction has been found. See Samantha Luks & Michael Salamone, Abortion, in Public Opinion, supra note 63, at 80, 82-83.

n139. See Robert McGlory, Opens Abortion War, Chi. Def., Mar. 21, 1973, at 1 (describing opposition of Jesse Jackson to legalized abortion as a way to reduce population growth); Castellano Turner & William A. Darity, Fears of Genocide Among Black Americans as Related to Age, Sex, and Region, 63 Am. J. Pub. Health 1029, 1029-34 (1973) (explaining concerns of African-American men and women about abortion when it was described as a method of population control).

n141. See McGlory, supra note 139, at 1.

n145. See Auerbach, supra note 143, at A6.

n146. See, e.g., id.

n147. See, e.g., id.

n148. See Blacks Split on Sex, Chi. Def., February 15, 1971, at 1. Similarly, a 1972 study published in the American Journal of Public Health found that 51% percent of African-American women polled believed that population growth was important for the survival of the race, and 37% were convinced that legalized abortion as a form of "black genocide" was a genuine threat. See Turner & Darity, supra note 139, at 1029-34.

n150. Id. at 518.

n151. Id. at 516. This result has been confirmed by several recent studies of popular opinion on abortion. See, e.g., Jennifer Strickler and Nicholas L. Danigelis, Changing Frameworks in Attitudes Toward Abortion, 17 Soc. F. 187, 195, 197 (2002) (finding that, when similar controls were applied, African-Americans were more likely than whites to support abortion by the 1990s); Clyde Wilcox, Race Differences in Abortion Attitudes: Some Additional Evidence, 54 Pub. Op. Q. 248, 248-55 (1990) (arguing that, when studies control for religiosity, African-American opinion about abortion was becoming more favorable in the 1980s).

n152. See, e.g., Rimmerman, supra note 4, 80, 168; Klarman, supra note 3, at 474, 480.

n154. The Baehr litigation resulted from the efforts of same-sex couples rather than the work of a state or national gay rights organization. See Jeffrey Schmalz, Ruling Boosts Chances for Gay Marriages in Hawaii, Seattle Post Intelligencer, May 7, 1993, at A3.

n156. Id.

n157. 852 P.2d 44, 68 (Haw. 1993). Appealing a trial court decision dismissing their complaint on the pleadings, the three couples' attorney, Dan Foley, offered two frames in his argument to the Hawaii Supreme Court: one based on a fundamental privacy right to marriage, and another based on equal protection doctrine. See id. at 51-52 (describing the petitioners' complaint). Baehr rejected the privacy-right frame proposed by Foley, refusing to acknowledge that a right to same-sex marriage was "implicit in the concept of ordered liberty, such that neither liberty nor justice would exist if it were sacrificed." Id. at 57. At trial, the parties and the trial court focused on whether gays were a suspect class, and the trial court found that homosexuals in Hawaii were not a suspect class because they had "not been relegated to a position of "political powerlessness" and because Hawaii's marriage restriction did not "burden ... the exercise of the right to engage in a homosexual lifestyle." Id. at 53. By con-
trast, the Baehr Court described the issue of sexual-orientation discrimination as "irrelevant," framing the question instead as one of discrimination on the basis of sex. See id. at 53 n.14. For this reason, the court remanded the cases with instructions to the trial court to apply strict scrutiny in analyzing the state's marriage restriction. Id. at 68.

n158. In Hawaii in the early 1990s, state organizations also combined natural law and "special rights" arguments in their advocacy. For example, Mike Gabbard, a prominent anti-gay activist, founded organizations called Stop Promoting Homosexuality Hawaii and Common Sense Now, which described homosexuality as unnatural and illogical. George de Lama, Hawaii May Lead Way on Same-Sex Marriage, Chi. Trib., May 15, 1994, at 21. Baehr helped to marginalize some of these arguments in Hawaii and focused in-state debate on the question of the state's justification for excluding gays from marriage. In April 1994, the Hawaii House of Representatives passed a law explaining that same-sex marriage could be banned because of "concern for the health and well-being of future generations." Bruce Dunford, Tourism a Pawn in Hawaii Same-Sex Marriage Battle, Pittsburgh Post Gazette, Apr. 18, 1994, at A4. After Baehr, even Gabbard described the issue of same-sex marriage differently, telling the Chicago Tribune that "the whole issue of same-sex marriage [came] down to examining the values of family, and society["s] interest in keeping families strong." De Lama, supra note 158, at 21.

n159. There is an extensive literature on the evolution of the same-sex marriage struggle in the 1990s. See, e.g., George Chauncey, Why Marriage? The History Shaping Today's Debate over Gay Equality 124-28 (2004); Eskridge, supra note 3, at 32-42 (analyzing the politics of sexuality and same-sex marriage in the late 1990s).

n160. For analysis of the New Right opposition to same-sex marriage and to homosexuality, see generally, Sara Diamond, Not by Politics Alone: The Enduring Influence of the Christian Right 164-72 (1998).

n182. Evan Wolfson, Liberty, Justice, and Marriage for All, Forward, July 4, 2003, at 72 available at http://www.forward.com/articles/7619/; see also Readers and Members' Comments on Same-Sex Marriage, PFLAG Newsletter (Summer 2003), in PFLAG Papers, supra note 168 (relating the argument of one PFLAG member that same-sex marriage was an issue of equal protection and equal dignity, the contention of another that marriage was a choice-based right, like abortion, and the assertion of yet another that marriage was an issue of privacy). The Human Rights Campaign also stressed privacy arguments in its July 2003 "Rapid
Response Campaign," a program designed to capitalize on a potential victory in Goodridge. HRC's Rapid Response Campaign (July 2003), in PFLAG Papers, supra note 168. Human Rights Campaign members were also told to state that "the decision of whom to marry should be left to individuals - not dictated by the government." Id.

n218. Mark DiCamillo & Mervin Field, The Field Poll 2 (May 28, 2008), http://www.field.com/fieldpollonline/subscribers/Rls2268.pdf (arguing that younger subjects were more likely to support same-sex marriage in California, as were more politically liberal and less religious citizens) [hereinafter Field Poll, May 2008].

n224. Field Poll, May 2008, supra note 218, at 3. The shift in approval of same-sex marriage among Caucasians in the same period was much less significant. Through 2006, 53% of Caucasians supported same-sex marriage. Field Poll, Mar. 2007, supra note 219, at 4. By July 2008, when Caucasians were asked about an anti-same-sex-marriage amendment, 54% stated that they would vote against such an amendment, a much less significant shift than was observed among African-Americans in the same period. Field Poll, May 2008, supra note 218, at 3.
